

Discharge/Balancing info.
 LTC6810-1 does not allow simultaneous discharge of two adjacent cells (page 71 in datasheet). This limits the maximum discharge voltage over S(n) to S(n-1) to 1 cell.
 Power losses and discharge current:
 $V_{in} = 4.2V$, Discharge current = 101mA
 Fuse, 0.5R -> 5mW

Default termination and resistor selection suitable for external 1:1 transformer and short to medium cable length with moderate amount of noise. See LTC6810 Datasheet for calculations if adjustments are needed.

Connector for up to 4 pairs of 10k NTC thermistors.
